

RUF3-HSTV series

The RUF3-HSTV features a "virus check function" that automatically detects and quarantines viruses. Saved and updated files are monitored in real time for virus infections. Infected files are detected and automatically quarantined in a dedicated folder, preventing virus infections in advance to provide users with greater reassurance.

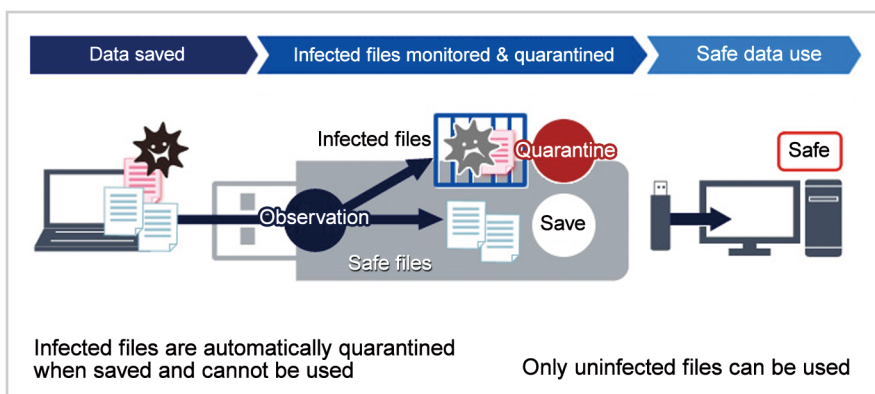

Compatible with security management software (optional)

System administrators can use Buffalo's optional RUF2-HSC-MGR "SecureLock Manager 2" USB memory management software to set up RUF3-HSTV drives to conform to the company's own password policies and other security settings. This helps ensure thorough compliance with the company's working rules. SecureLock Manager 2 includes password policy settings, password recovery, log function, and more.

* Use with RUF3-HSTV Series requires SecureLock Manager 2.

"Virus check function" automatically detects and quarantines infected files

Strong forced hardware encryption

Since any data saved to the RUF3-HSTV is force-encrypted, you never need to worry about encryption hassles or forgetting to encrypt the data. Access to the RUF3-HSTV also requires password authentication. Even if the drive is ever lost or stolen, the combination of forced encryption and password authentication prevents leakage of your vital data.

Features

- Supports security management software (optional)
- USB 3.0 support
- Strong forced encryption function
- Virus Check
- Capless design
- Includes strap hole
